The Uneasy Feeling of Driving For Lovers Guide to Dating (2010). The True Meaning of Reaching One's Potential Through Dating Relationships (2010). The Ultimate Guide To Dating Online (2012). The Most Terrifying Date You've Ever Had (2012). In this proposal, we plan to develop the use of a novel chemical compound to induce autophagy (Alphagene-based autophagy inducer, ABI). ABI enters the cell via the endocytosis pathway, but accumulates in the endoplasmic reticulum (ER) where it induces autophagy. The Alphagene derivative we developed, ABI (N-(4-bromophenyl)-N-(3-chloro-2-hydroxypropyl)aminobutyl)-2,2-dimethylpropionamide, has the advantage of being orally bioavailable, nontoxic and highly water-soluble, and thus safe. In addition, ABI significantly induces autophagy in a variety of tissues, including the muscle, liver, lung, heart, brain, and kidney. The molecular mechanism underlying this phenomenon is not well understood. In this application, we propose to systematically investigate the action of ABI on the ER stress response and the autophagy induction. We will also study the interactions between autophagy and apoptosis. We will further examine the efficacy of ABI in animal models of cardiac disease. Results from these studies should have important implications for the development of autophagy-based therapies for cardiac diseases, including cardiac hypertrophy, myocardial infarction, and heart failure. PUBLIC HEALTH RELEVANCE: During the past few years, the autophagy pathway has gained a significant interest because of its role in development of different types of human disease, such as cancer, infectious diseases, and cardiac diseases. Drugs that induce autophagy may have a broad range of therapeutic applications, including the treatment of cystic fibrosis, Huntington's disease, spinal cord injury, and neurodegenerative diseases. We propose to develop an autophagy inducer (ABI) to be used as a therapeutic agent for the treatment of cardiac disease. Samuel Bramwell (1789-1851): un cas d'hydroptère diabétique. Samuel Bramwell (1789-1851) was the son of a London ironmonger and grocer. He was the youngest of six children, and inherited the family 82157476af
